THE RISE OF MODERN LIVING.

Imagine the sun's warm touch on your skin, its soft sunlight blanketing everything in a soothing glow and creating a serene, energetic atmosphere. It's a moment where you can almost feel nature's peaceful embrace, as if time itself slows down to let you savor the beauty of the moment. At Joivi, we bring this feeling to life with our furniture, designed to enrich both open-air and indoor spaces.

Joivi is guided by the idea that spaces should not define the way we live. Indoor and outdoor are conceived as a single, continuous environment, where furniture exists beyond fixed contexts. Objects move freely between moments, atmospheres and places, guided by a quiet balance of design, comfort and material awareness that shapes a new sense of everyday living.

THE JOIVI WAY.

“The approach is founded on creating products that fully express their inherent qualities, through a design language that establishes continuity between indoor and outdoor environments, without distinction in intent or expression. Each object is conceived to operate beyond spatial boundaries, holding its identity intact while naturally inhabiting any context, so that space itself becomes a flexible condition rather than a defining limit.”

— SIMONE VIOLA

WHERE THE SOURCE MATTER.

Each piece is conceived as part of a shared vision, while retaining its own distinct character. Materials, palette and finishes are selected with care and intention, responding to different living settings while ensuring reliability, comfort and longevity over time. Tradition and innovation coexist through a continuous investment in technology and processes that allow design to engage precisely with its surroundings.

Sustainability sits at the core of Joivi's vision, guiding the entire product lifecycle. From the use of 100% recyclable materials such as stainless steel and aluminum, to recycling initiatives that reduce waste, each choice reflects a responsible approach. Wood collections are crafted exclusively from 100% FSC® teak, sourced from carefully managed forests that meet rigorous environmental, social and economic standards. This commitment is supported by globally recognized environmental and safety certifications.

Aribe

DESIGN BY SIMONE VIOLA

Bold linear forms move with a quiet lightness, where texture engages in a precise dialogue, and layered materials combine with defined shapes, culminating in a presence that is at once controlled and impactful.

Aribe unites complex woven detailing with expansive, sculptural volumes, establishing a sensory dialogue between texture and mass that reads as both contemporary and subtly exotic, supported by a lightweight aluminium structure. The patterned, tactile backrests and exterior planes set up a deliberate tension against the fluid, soft seating, forming a composition that feels organized yet naturally welcoming. Geometric intent and artisanal precision converge to shape a distinct, assured presence, where material depth and formal resolution resolve into a single, calibrated harmony.

Noma

DESIGN BY SIMONE VIOLA

Forms adapt as if breathing with the space, modules aligning and expanding with measured intent, structure guiding while volume receives, producing a dynamic presence that shifts responsively into every configuration.

Noma expresses the core idea of modular design, where elements shift and extend to adapt across different settings, supported by a strong yet minimal metal frame, while soft cushions add a calm tactile contrast. Each module is conceived as part of an open system, able to connect, rotate, and expand in every direction, allowing compositions to grow freely and take on entirely different configurations. Noma defines spaces with order and adaptability, where its modular logic remains understated, allowing the system to read as a continuous, cohesive form rather than a composition of separate elements.

Baia

DESIGN BY SIMONE VIOLA

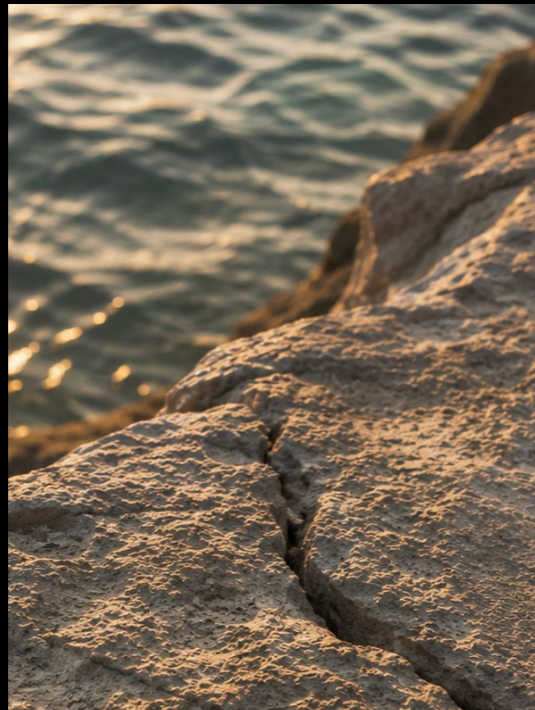

Clean, purposeful lines are grounded in tactile warmth, the woven seat enlivening the structure with nuanced detail, design that celebrates simplicity without losing character, producing a presence that feels alive and approachable.

Baia celebrates the essence of everyday seating, combining clean, minimal geometry with a warm, tactile texture. The steel structure provides definition and strength, while the woven pattern on the seat introduces a perceptual sensory dimension, recalling traditional craftsmanship in a contemporary form. The balance between rigidity and softness makes the collection versatile and approachable. Baia expresses simplicity, function, and comfort, creating a chair that feels both familiar and composed.

Feitian

DESIGN BY JOIVI LAB

Lines float lightly through space, movement taking shape with restrained energy, the structure lifting and flowing as if in motion, an ethereal presence that transforms emptiness into an expressive stage.

Feitian explores the idea of movement translated into form. An aluminum structure traces fluid lines that appear to lift the composition from the ground, giving the collection a suspended and dynamic character. Structure and continuity work together to create a visual language where solidity and lightness coexist. The flowing profiles generate a sense of motion, shaping the surrounding space with a calm but distinct identity. Feitian expresses balance through elevation and rhythm, where form appears to float while remaining grounded in precise construction.

Sento

DESIGN BY JOIVI LAB

Forms that breathe with balance and poise, each line tracing quiet precision while comfort is woven into the design, creating a composed presence where every detail finds its place.

Sento brings together substantial, rounded volumes and delicate woven details to create a harmonious composition. The contrast between the solid structure and the light, airy patterns of the rope introduces a tactile rhythm, at once controlled and sensorial. Cushions add softness, completing a material interplay that feels measured and balanced. The collection occupies space with quiet confidence, where weight and lightness, firmness and comfort, coexist in a cohesive and pleasing dialogue.

Pinni

DESIGN BY JOIVI LAB

Generous volumes engage with delicate textures, touch leading the reading of spatial and tactile qualities, while material contrasts set a sense of balance and intent, forming a presence that feels grounded, welcoming, and unmistakably defined.

A collection shaped by intention and dynamism. The structure outlines clean, architectural lines, while the soft volumes of the seating introduce a sense of depth and calm. Geometry and proportion work together to create a balanced composition, where lightness and solidity stand side by side. The result is a design that shapes and defines the space around it, giving each environment a distinct and composed character.

Moon

DESIGN BY JOIVI LAB

Curves shape space with calm precision, recalling pure, essential geometry, as modules interact to form flexible yet defined compositions, producing a presence that lets the environment shift into alignment.

Inspired by the celestial body, Moon explores the expressive strength of a pure, circular geometry. The collection takes shape through a series of modular elements, each conceived as part of a coherent spatial composition. The seating volumes remain measured and defined, emphasizing the clarity of the form while maintaining comfort and composure. Through its modular nature, Moon allows multiple configurations, adapting to different environments while preserving the integrity of its geometry.

Shahdor

DESIGN BY JOIVI LAB

Spaces open up with architectural elegance, while modular freedom allows forms to adapt with intention, offering a versatile framework where structure meets the fluidity of outdoor living.

Shahdor interprets outdoor space through pavilions grounded in essential geometry and a deliberate openness of design. The structures are light and airy in presence, encouraging a direct relationship with the surrounding landscape, while adjustable components such as curtains and aluminum panels allow the configuration and use of each setting to shift according to specific needs. The collection is built on a balance between compositional discipline and freedom of use, shaping outdoor environments that feel intimate and expressive.

Simone Viola

Born in Mendrisio in 1985, Simone Viola studied Industrial Design in Milan and collaborated with leading architecture and design studios across Italy and beyond. In 2011, he established his own studio in Switzerland, focusing on industrial and furniture design. Since 2024, he has effectively assumed the role of Creative Director at Joivi shaping projects that merge industrial precision with artisanal craftsmanship. His designs are defined by clean lines, thoughtful solutions, and a refined aesthetic that fosters meaningful connections between people and spaces, enriching everyday living through beauty, function, and emotion.

Joivi Lab

Joivi Lab stands at the core of the company's creative and technical ecosystem, a space where intuition meets method, and ideas are rigorously explored before taking form. More than an in-house studio, it operates as a dynamic platform where designers, engineers, and specialists engage in an ongoing dialogue, shaping projects through a shared process of research, experimentation, and refinement. Rooted in the company's identity yet open to external perspectives, the Lab reflects a constant drive towards innovation, transforming complexity into coherence, and ideas into objects that resonate with purpose, intelligence, and enduring quality.
